Chicago, IL | robert.a.neyrinck@gmail.com | linkedin.com/in/robert-neyrinck | github.com/rneyrinck

SUMMARY

Hands-on full-stack engineer with 7 years of professional experience spanning B2B technology consulting and AI-assisted software engineering. Focused on rapid delivery of AI-enabled applications, prototypes, APIs, automations, and production deployments in ambiguous, fast-moving environments.

CORE SKILLS

API Development, Backend Development, UI Development, Scripting, Automation & Workflow Automation, Prototype & PoC Development, System Integration, AI-Assisted Development, Python, JavaScript, TypeScript, GenAI & Model API Integration, Agent Patterns, CI/CD, GCP

EXPERIENCE

AudioEye

Feb 2025 - Jun 2026

Software Engineer, Web Accessibility (Contract)

- Built and shipped production remediations for the most technically demanding customer-facing sites in the portfolio (asynchronous rendering, nested Shadow DOM, unstable selectors), resolving 40+ high-priority defects per site under tight client timelines.
- Designed and shipped a reusable JavaScript remediation utilities library adopted team-wide, cutting ticket lifecycle time by 20% while pairing AI-assisted tooling with disciplined manual review.
- Implemented and validated accessibility Web Workers to offload heavy client-side processing from the main thread, improving UI responsiveness across sites with 5,000+ daily visitors.

Frontpage

Sep 2024 - Feb 2025

Full Stack Engineer / Technical Co-Founder

- Owned full-stack application delivery solo - backend, frontend, database design, REST APIs, testing, and CI/CD deployment - taking a SaaS product from zero to a paying-customer-ready MVP in 2 months with 50 early signups.
- Built core REST APIs and integrated Stripe billing, authentication, and webhook-driven third-party services, translating user feedback and feature reviews into shipped releases.
- Designed a reusable Django/Tailwind component library and set up CI/CD with Render, GitHub Actions, and CircleCI for zero-downtime deployment.

Sapphire Studios

Nov 2022 - Sep 2024

Full-Stack Engineer

- Mapped the campaign lifecycle across internal and external users to identify performance issues and workflow bottlenecks, directly informing development priorities and roadmap decisions.
- Built a MongoDB-backed, LLM-driven product-intelligence application using structured campaign inputs, model API integration, and business rules, lifting creative efficiency by 30%.
- Designed a Slack-to-Jira workflow automation that converted unstructured employee reports into actionable engineering tickets, cutting issue resolution time by 25%; built Python/Redis-backed messaging automation to improve reliability.
- Managed branch-based CI/CD deployment workflows on AWS with CircleCI across development, staging, and production environments.
- Served as Interim Lead Full Stack Engineer for the final 3 months, converting manual workflows into production applications with Node.js, Python, Django, and FastAPI while communicating risk and tradeoffs to nontechnical stakeholders.
- Interviewed and hired a UX researcher whose audit informed a JavaScript-to-HTMX frontend migration across platforms serving 5,500 combined users, reducing page load times by 10%.

AudioEye

Apr 2022 - May 2023

JavaScript Developer (Contract)

- Remediated 60+ accessibility issues per customer site through JavaScript, HTML, and CSS fixes for keyboard navigation, screen-reader support, ARIA, and dynamic-content behavior.
- Collaborated with product managers, QA, and senior engineers in Agile delivery, using Chrome DevTools, DOM inspection, and assistive-technology validation to resolve complex frontend behavior without breaking existing functionality.

Career Transition (May 2020 - Dec 2021): Returned to school for software engineering coursework, City Colleges of Chicago.

TTSG

Feb 2019 - May 2020

B2B Technology Consultant / Senior Account Executive

- Sold \$2.9M in managed service contracts to organizations with complex, regulated operational environments; promoted to Senior Account Executive and named Salesman of the Year.
- Worked directly with business owners, executives, and operations teams to diagnose inefficiencies and propose managed technology solutions, building customer discovery, ROI framing, and executive communication skills.

FREELANCE PROJECTS

- SuperStarAgency: Built an agentic operating system using ElevenLabs voice AI and GPT-based video generation to automate proof-of-concept creation and demo production for an email-marketing pipeline, reducing manual production time by 20%.
- DubClub: Audited the sports-betting analytics application, led UX interviews with the founding team, and built a full-stack proof-of-concept surfacing consensus and divergence signals across capper picks; presented findings and the working prototype to both co-founders.
- XAI (now Makerswith.ai): Audited an agentic AI codebase supporting a Snickers AI video-generation engagement, identifying and resolving cost and performance issues beyond the original scope.

SELECTED PERSONAL PROJECTS

Code-Navigator - Developer Onboarding Tool

- Built a static-analysis tool that extracts metadata about functions, imports, and dependencies from unfamiliar codebases and auto-generates a Markdown guide summarizing each file's purpose (github.com/rneyrinck/code-navigator).

PayGrow - Fintech Platform Prototype

- Designed and built a microservices-based fintech prototype spanning authentication, KYC, ledger, consumer and SMB workflows, notifications, bank emulation, and AI services using Node.js, TypeScript, PostgreSQL, Docker, GraphQL, and React (github.com/rneyrinck/paygrow-prototype).

Discord Bot Server Connect Tool

- Built and launched a Discord bot that generates and shares server-connect links for private matches and community games, shipping from personal observation to a working tool used by an active player community.

EDUCATION

Software Engineering Immersive Certificate - General Assembly, Chicago (Dec 2021 - Apr 2022)
